

Breakable Easter Egg

INGREDIENTS:

- Super White Candy Coating
- Jimmies
- Easter Bunny Sprinkle Mix
- Green Apple Gummy Bears

TOOLS FROM CKSA:

- Spatula
- Candy Mold #90-2608
- Angled Spatula
- Food-Safe Egg Carton
- Wood Hammer

DIRECTIONS: continued on next page

1. Melt Super White Coating in the microwave until completely melted-- 30 second intervals work best.
2. Once melted, add a generous amount of a jimmy sprinkle mix-- the color will not bleed out.
3. Spoon the melted coating/jimmy mixture into each cavity of mold #90-2608. Use an angled spatula to drag the coating around the entire cavity.
4. Once each cavity has been coated, put into the refrigerator for 5-7 minutes.
5. Once the base coat has set up, add a thin second layer of melted coating towards the top edge of each cavity.
6. Place the mold back into the refrigerator for 10 minutes.
7. Once the egg shells are completely set, invert the mold to release each piece of candy coating.

8. Heat a plate in the microwave until it is hot. Use this to smooth the edges of 3 of your egg shells.
9. Fill the smoothed egg shells with a Easterly sprinkle mix & gummy bears.
10. Reheat your plate and smooth down one shell at a time. While the coating is still wet, set the shell on top of the filled shell to seal in the sprinkles & gummy bears.
11. Place completed breakable eggs into a food-safe egg carton.
12. Use a small wooden hammer to break open the egg!
